SUMMARY

Software engineer with 4 years at Toyota shipping cloud-connected production features to **millions of users** and building AI developer tooling. Unprompted, specced, built, and now operate an internal MCP platform that LLM agents use for testing, CI/CD, and release automation, adopted by **6+ engineers daily**. Works in Swift, TypeScript/Node.js, and Python with GraphQL, REST, Docker, and GitHub Actions.

TECHNICAL SKILLS

Languages: Swift, TypeScript/JavaScript (Node.js), Python
Cloud & DevOps: Docker, GitHub Actions CI/CD, Git/GitHub, GraphQL, REST APIs, LaunchDarkly, JFrog/Artifactory
AI & LLM: Model Context Protocol (MCP), LLM agents, tool and prompt orchestration, knowledge graphs, AI-driven testing
iOS: SwiftUI, Swift Concurrency (async/await), Combine, Swift Package Manager, Firebase, Xcode
Testing & Security: Appium, XCTest, Swift Testing, Proxyman, SonarQube, CodeQL, TLS and endpoint hardening
Currently learning (side projects): Amazon SageMaker (endpoints, Model Registry), Amazon Bedrock, RAG with embeddings and vector stores (pgvector), AWS CDK

EXPERIENCE

Toyota Motor North America – Plano, TX (Hybrid) July 2022 – Present
iOS Software Engineer

- Shipped cloud-connected production features for the Toyota, Lexus, and Subaru connected-vehicle app across 3 brands and 4 regions, serving **millions of monthly active users**, including the Australia & New Zealand launch
- Without being asked, specced, designed, built, and operate Toyota Mobile MCP, an internal TypeScript/Node.js service that gives LLM agents tools for development, QA, and releases; adopted by **6+ engineers daily** (see Projects)
- Built remote vehicle commands on GraphQL subscriptions and real-time telemetry for reliable cloud services
- Released Data Transmission Off privacy controls behind LaunchDarkly feature flags for gradual rollouts; ran iOS/Android parity checks on region-state gates and endpoint usage
- Led security hardening of the iOS codebase: TLS 1.3 enforcement, query-parameter data moved into request bodies, WebView JavaScript and endpoint audits, and CodeQL alert fixes
- Migrated multiple Flutter features to native Swift (including EV Wallet, navigation, POI), improving performance
- Captained the 2026 SWARM Toyota Global Hackathon team, the first OneApp team to connect to Arene (see Projects)
- Onboarded **10+ engineers** on architecture, tooling, and conventions; run first-round technical interviews and promote Agile

Children's Health – Dallas, TX (Remote) Jan 2022 – May 2022
iOS Software Engineer – UTD Computer Science Senior Project

- Built an AR children's learning platform in Swift and Firebase with two software teams, a hardware team, and a UI/UX designer

Wells Fargo – Irving, TX (Remote) June 2021 – Aug 2021
Software Engineer Intern

- Closed **20+ bugs and vulnerabilities** in a .NET system using SonarQube
- Added regex input validation to auto-loan fields to reduce SQL injection risk

PROJECTS

Toyota Mobile MCP Server – internal AI developer platform TypeScript/Node.js

- Cut weekly release-note prep from **2+ hr to under 30 sec** (about **100 hr/yr** saved) with a GitHub Actions pipeline that pulls TestFairy builds and Jira tickets
- Cut test-account lookup from **30 min to 1–3 min** by automating iOS/Android sign-in and account switching across STG/prod, brands, and NA/AU regions (OTP, password reset, Confluence tracker)
- Built AI-driven E2E testing on physical iOS/Android devices via Appium: YAML test cases, live/replay modes, self-healing accessibility-ID targeting, and a knowledge graph that cuts agent token usage
- Built an AI PR auto-reviewer (listener, repo-aware guidance, approval dashboard) that reviews up to **9 PRs concurrently**; added agent-driven API mocking through Proxyman for cloud-service tests
- Integrated Jira, Confluence, and GitHub workflows; demoed the platform to leadership

Arene Trip Twin – 2026 SWARM Toyota Global Hackathon Swift, Docker

- First OneApp team to build on Arene, Toyota Woven's vehicle OS, which is normally closed to development; worked through limited SDK access inside its Docker container
- Merged vehicle health, range, tires, maintenance, weather, route, and charging data into one trip-readiness assessment

EDUCATION

The University of Texas at Dallas – B.S., Computer Science May 2022
Hispanic Scholarship Fund Scholar • Society of Hispanic Professional Engineers (SHPE)
